

WEAR & BEARING MATERIAL FOR MARINE SUBMERSIBLE PUMP

A range of engineering material for marine applications – self lubricating (water or liquid media) thrust bearing material incorporating various solid modifiers, including the pure composites specially developed for use with fluid.

These versatile wear resistant bearing material were specially developed to work in aggressive environment such as submersible pumps, Compressors, Marine and Offshore, Hydro, railways, fluid handling and many more industrial applications.

- Pump shaft bearings, Thrust Washers and Bushes
- Plain & Flanged Bearings, Thrust Washers, rings
- Marine rudder & stern tube bearings, Deck equipment
- Hydro Turbine Wicket gate Bearings. Main gate bearing
